To the Ohio Power Siting Board,

The pictures enclosed were taken by Mary Tong on her cellphone on June 7, 2022. On the back of each photo includes the time, date & location. These were taken to show that just an inch and a quarter of rain falling in a little over an hour can cause flooding in our area. This ponding stayed on us for well over a day. Depending on rain fall it can stay for days.

Technician EL Date Processed 7-21-2022

Brenner's Fence Row is approx., 250 feet from where a 13 ft. fall of land begins. These figures were provided to us from Hancock Soil & Water. We are the lowest point, therefore we get all the runoff off water to the tile located under Township Rd. 243. It's important all this is documented for our future. This is why zero tiles can be damaged. The land in our area is not going to be able to withstand solar. Had this been hundreds of panels, just imagine the flood.

Brenner's Fence row

TR 243

This photo is approx. 5 acres
under water, it all had
to be replanted. Depending
on rain fall it can be more acres,
