| | As more extreme weather events impact the nation, I find it ever more important that Ohio be prepared for these impacts and implement projects to ensure that Ohio will be a positive player in mitigating the reasons behind these critical climatic changes. The new proposed rule changes by the Ohio Power Siting Board (OPSB) present an incredible opportunity for Ohio to take serious action on climate change and transition to renewable |

energy sources which have much lower impacts on natural and human environments than fossil fuel sources. That's why I submit this request to OPSB to take into consideration carbon emissions and climate change when reviewing power plant applications. Specifically, all applications should be required to develop climate mitigation and adaptation plans, provide information regarding carbon emissions, and discuss how they factored long and short-term climate change into their project proposal. Please amend your rules to include considerations of climate change and carbon emissions throughout the siting process regarding on OPSB's Five Year Review of Ohio Administrative Code chapters 4906-01 through 4906-07. Let's all work to make Ohio a national and world leader in transitioning to a cleaner, more environmentally friendly approach to energy generation. We see extreme weather events, drought, and other harmful climate emergencies on the rise due to our continued reliance on fossil fuels. To create a sustainable future and a livable planet for our children, these considerations are absolutely necessary. Thank you for your time, consideration, and service to our state. I also support the comments submitted by the Ohio Environmental Council on August 5, 2022.
