Thank you for responding to my inquiry Matt, it's much appreciated.

Kind regards,
Cassidy

Ohio Power Siting Board,

On August 5, the Ohio Environmental Council filed a comment with the Ohio Power Siting Board asking them to consider climate change and greenhouse gasses when reviewing power plant applications. Climate change considerations are key to the public interest and safety of Ohioans. Please amend your rules to include considerations of climate change and greenhouse gasses throughout the siting process, as recommended by the OEC in OEC's Comments on OPSB's Five Year Review of Ohio Administrative Code chapters 4906-01 through 4906-07

As an Ohio resident, climate change is an issue of utmost importance to me. The most recent science says we only have a few years to transition our electric power sources away from fossil fuels to avoid the worst impacts of climate change. It is in the public interest for the Ohio Power

Siting Board (OPSB) to closely consider climate change in all its decisions. As you draft new rules governing your operations and application process, include climate change in your public interest analysis.

Specifically, all applications should be required to develop climate mitigation and adaptation plans, provide information regarding greenhouse gas emissions, and discuss how they factored climate change into their project proposal. In addition, the OPSB should provide more guidance for its public interest analysis under R.C. 4906.10(A)(6) that considers a project's relationship to climate change.

Ohioans deserve an energy system that works for everyone and ensures a renewable, sustainable world for future generations. The OPSB can no longer ignore the threat climate change poses to the environment and public health of all Ohioans.

Sincerely,
Cassidy Thompson
