Two 3.45 mile long transmission lines, 1,553,00-2,391,000 solar panels being held up by posts pounded 10 feet in the ground, 328 battery containers, 2 15 acre substations and 44 miles of new access roads, and how many tons of top soil striped just for the driveways. The oak run project is not a farm. Its an industrial solar facility. Thats is going to ruin 6,060 acres and have devastating impacts on every neighboring property, wildlife and Darby water shed . This project is not about the renewable energy. Its about the money. For we have seen savion throw money around to get support. This project will ruin the county roads and add more traffic. As we have seen the influx in traffic from the madison fields project up the road. Solar does not fit on farmland. There is plenty of land that would make more sense for solar then orelton farms. Im asking the OPSB to REJECT the oak run solar project. If this project gets approved it will be a giant dumpster fire and we the people living and farming beside it will be stuck with it.
