**DOCKETING DIVISION**  
Public Utilities Commission of Ohio

I think it's really pathetic Savion can only find support from out-of-town people that would probably feel differently it was happening in their local area. Even more pathetic is that they're submitting comments about Clermont County to this case. The locals don't want their money or jobs. We have enough. Regarding "agrovoltaics" if it was feasible, why is it not already happening? Who wouldn't want to make more money from their solar site? It doesn't take a genius to answer those questions, but apparently there are a lot of people that can't. "Agrovoltaics" is not feasible. It is not economically nor agronomically viable. It is a pipe dream that Savion is using as an argument to justify an industrial energy production (intermittent at best) that will likely destroy productive soils and a part of Madison County's agricultural economy. Madison County and the majority of locals do NOT want it. We have done enough solar and are already suffering the consequences of the projects we do have with little benefit. Schools are still asking voters for money.
