EXCHANGE SERVICES

CUSTOM LOCAL AREA SIGNALLING SERVICES (CLASS)

A. General

1. The Telephone Company provides Custom Local Area Signalling Services (CLASS) which includes one or more of the following:

a. Repeat Dialing

Automatically redials the last outgoing number after the customer activates the service by dialing an activation code. Repeat Dialing monitors the busy line and performs a call set-up when both the originating and terminating lines become idle. After activation of the feature, the originating and terminating customers may place other calls without affecting the Repeat Dialing service status. This service may also be used to recall a called party after the conversation has been terminated.

b. Call Return

Enables a customer to return the last incoming call unless the call is from a private or blocked number, whether or not it was answered. The customer dials an activation code and the last incoming call is automatically dialed. If the line is busy when the customer activates the service, a confirmation announcement is heard, the customer hangs up, and a queuing process begins. For the next thirty minutes both the calling and called parties' lines are checked periodically. The call set-up is made when both the originating and terminating lines are idle. After activation of the feature, the originating and terminating customers may place other calls without affecting the Call Return service status. Up to ten calls may be held in queue for the customer's Call Return activation. (T)

c. Call Return Block

Prohibits a customer who subscribes to Call Return from returning a call by activating the Call Return code. By dialing an activation code before placing a local call, a customer may "block" the called party from returning a call to them, using Call Return. This service is free to all customers who subscribe to a one-party line, and is available on a per call basis only. After activating the Call Return Block code and placing the call, the line reverts back to normal status and future calls will not be blocked from being returned by Call Return subscribers. The caller must activate the code before placing each call in order to have Call Return Block activated.

EXCHANGE SERVICES

CUSTOM LOCAL AREA SIGNALLING SERVICES (CLASS) (cont'd.)

A. General (cont'd.)

d. Caller ID

Allows the customer to view the telephone number of the calling party when receiving a telephone call. The telephone number of the calling party is displayed on a customer-provided display device. However, the calling party may subscribe to services which will prevent the disclosure of their telephone number. In such instances, a privacy indication will appear on the customer-provided display device instead of the calling party's telephone number. Customers can either subscribe to this service or Caller ID Name and Number which delivers the name and number of the calling party. (See paragraph e. below.) (T)

e. Caller ID Name And Number (T)

Allows the customer to view the name and telephone number of the calling party before answering a call. A customer-provided special display telephone or call display unit is required. Calls from out of the local calling area will be shown as "out of the area" or "unavailable" if not connected by Signaling System 7 (SS7). Calls from customers who have used Select Line Blocking or Universal Per Call Blocking will be shown as "private" or "anonymous". Caller ID Name and Number is available where facilities permit. If the customer only needs delivery of the telephone number, they would subscribe to Caller ID. (See paragraph d. above.) (T)

f. Selective Call Reject

Provides the customer with a method of blocking calls from certain numbers, which may or may not be known to the customer. The customer may create a screening list of up to nine (9) telephone numbers, and place them in network memory through an interactive dialing sequence. The customer may also activate the service after receiving a call, and thus place the number associated with that call on the Selective Call Reject screening list. To activate the feature, the customer dials an activation code and the telephone number of each incoming call is checked against the customer's Selective Call Reject screening list.

g. Anonymous Call Rejection

Anonymous Call Rejection allows the customer to program their line to universally block all calls that arrive as a private or blocked number delivery call. By dialing an activation code, the blocking function will be activated and no private or blocked number delivery calls will get through. The customer will hear a confirmation recording that the feature is activated. Another code is dialed to deactivate. The customer will hear a confirmation recording that the feature has been deactivated. The calling party receives a denial announcement that the private call is being rejected and to hang up, do not block their number and call again.

CUSTOM LOCAL AREA SIGNALLING SERVICES (CLASS) (cont'd.)

A. General (cont'd.)

h. *Selective Call Forwarding*

Allows customers to create a special list of telephone numbers and a destination number through an interactive dialing sequence. By dialing an activation code, the customer activates the service. Only incoming calls from numbers appearing on the list will be forwarded to the predetermined remote station.

i. *Selective Call Forwarding - Remote Activation*

Allows customers who subscribe to Selective Call Forwarding to activate their feature from a remote location. By dialing a special seven digit telephone number, entering their own telephone number and an assigned four-digit PIN number, they can select the remote number to which the selected numbers may be forwarded or change the numbers on their selected list.

j. *Distinctive Ringing / Call Waiting*

Allows customers to designate several numbers that will be recognized immediately as important calls by means of distinctive alerting signal. Up to nine (9) numbers may be added to the screening list through an interactive dialing sequence. The customer then dials an activation code that activates the service. When the incoming call is identified as one of the numbers on the list, a distinctive ring will be produced in the customer's telephone to alert them that an important call is coming in. If the customer is using the phone and one of the selected numbers comes through on Call Waiting, the customer will receive a distinctive call waiting signal to let them know an important call is awaiting them.

k. *Universal Per Call Blocking (per call blocking)*

Allows the customer to prevent the disclosure of his name and/or telephone number to a called party. By dialing an activation code, the customer may block delivery of his name and/or telephone number. If the called party has a customer-provided display device, they will see a private status message in place of the calling name and/or number. This service is provided on a universal basis, where technically possible, at no monthly charge. All Payphone Service lines in the Chillicothe Telephone Company's service area will be equipped with Universal Per Call Blocking. (T)

CUSTOM LOCAL AREA SIGNALLING SERVICES (CLASS) (cont'd.)

A. General (cont'd.)

p. Incoming Call Control

This feature is available to residential and business customers in all Chillicothe Telephone exchanges. Incoming Call Control intercepts calls that are marked "unavailable", "out-of-area", "unknown", or "anonymous" on Caller ID units. *When unidentified callers dial the subscriber's number, they will receive an announcement informing them that, "the number you have reached does not accept calls from telemarketers. If you are a telemarketer, please add this number to your Do Not Call list and hang up now. Otherwise, please press '1' or stay on the line".*

The subscriber's Caller ID CPE (customer provided equipment) will still display the calling party's classification (e.g. unknown number or out-of-area). The subscriber must subscribe to a Caller ID service in order to subscribe to Incoming Call Control because the feature dips in to the Caller ID database to determine the caller's classification.

EXCHANGE SERVICES

CUSTOM LOCAL AREA SIGNALLING SERVICES (CLASS) (cont'd.)

B. Custom Local Area Signalling Services (CLASS) are central office-based telecommunications services capable of providing several optional service enhancements. These services will be offered from central offices where the equipment and facilities have been properly arranged. Custom Local Area Signalling Services (CLASS) cannot be functional unless both the called and calling parties are served by, and the call is routed through, appropriately equipped central offices, and routed over appropriately equipped facilities for calls between such equipped central offices. When a service cannot be functional, notification will be given that the call is outside the call area served by the service.

C. Rates and Charges

The following monthly rates and non-recurring charges apply to Custom Local Area Signalling Services (CLASS), and are in addition to the rates and charges applicable to any associated service, equipment and facilities.
